HELP

GET HELP

# *BEFORE GITHUB* WHY GIT?

# MULTIPLE PEOPLE

# MULTIPLE PEOPLE

- **Multiple people can work on the same file at the same time without hosing each others work**
- **Leads to greater productivity ( more people ), and quality ( more eyes )**

# MODULARITY/BRANCHES

# MODULARITY/BRANCHES

FEATURES

EXPERIMENTS

BUGS

# FEATURES *MODULARITY*

# FEATURES *MODULARITY*

- Break problems into manageable features
- Easily switch between features
- Feature A is no longer desired; Delete it
- Feature B is impossible; Delete it
- You totally screwed up feature C; Delete it

# Experiments *MODULARITY*

# Experiments *MODULARITY*

- **Test any idea without fear of jacking up your project**
- **Try multiple approaches to the same problem and keep the best**

# BUGS *MODULARITY*

# BUGS *MODULARITY*

- **You can squash a bug with multiple features or experiments in development**

# MODULARITY *IN REVIEW*

- **Eliminates the need for index.html, index2.html, index3.html**
- **Makes it less likely unfinished work will accidentally mix-in with production code**
- **Leads to greater productivity and quality**

# TIME TRAVEL

# TIME TRAVEL

- **Go back to any point in the history of development and review or restore code**
- **Remember what and why you did something in the past or in the present**

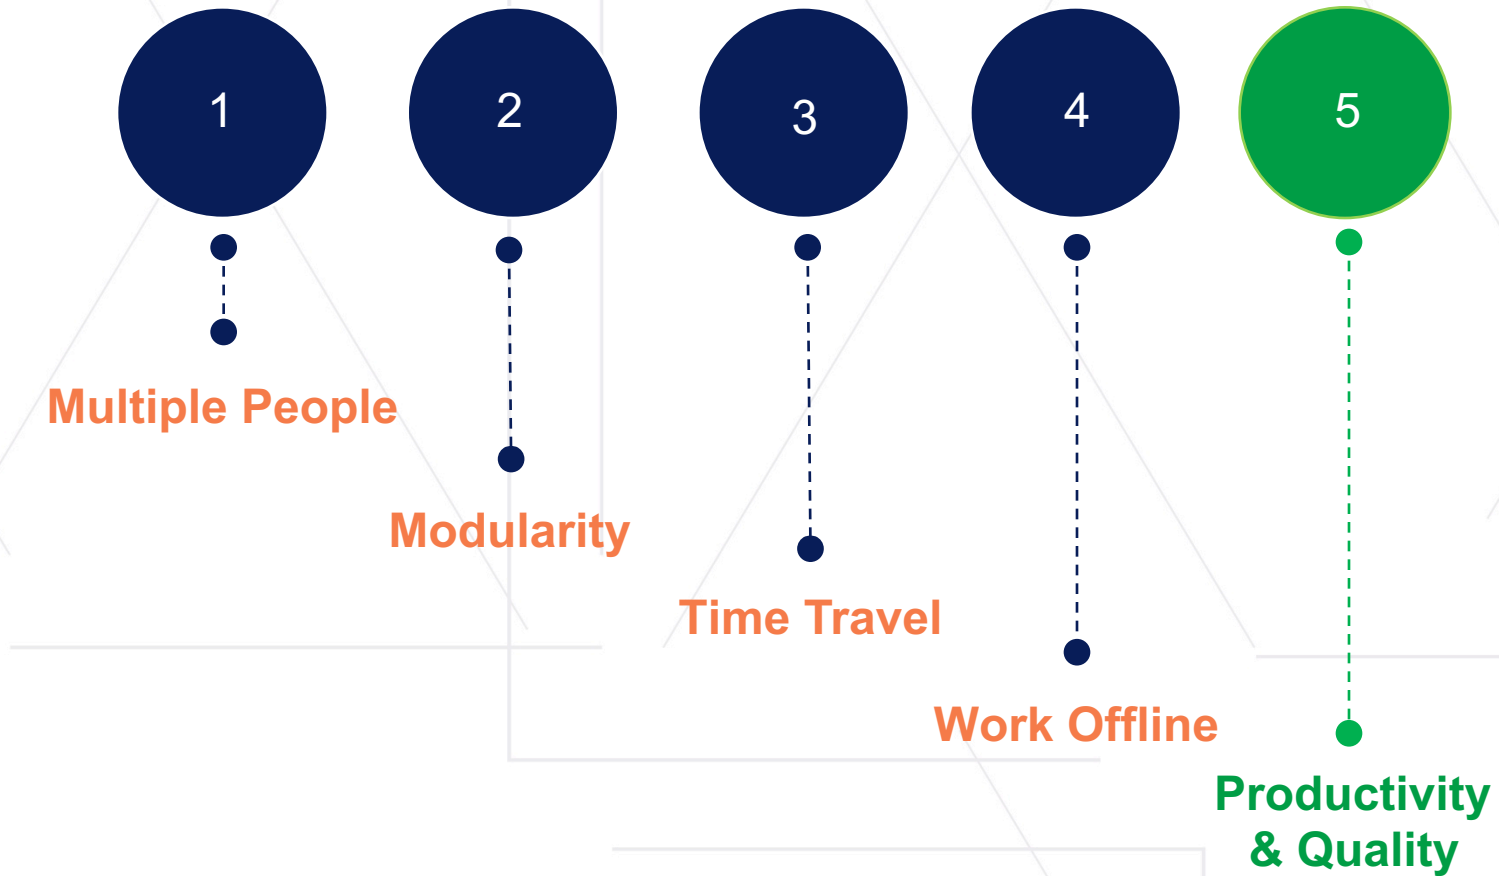

# WORK OFFLINE

# WORK OFFLINE

- On a plane, at the doctor's office, or waiting in the car
- Since Git is distributed you always have a backup of the entire history of your project

# WHY GIT? *IN REVIEW*

# WHY GITHUB?

01

**Security**

02

**Hosting** *(adoption)*

03

**Web Interface** *(adoption & collaboration)*

04

05

**Communication**  
*(collaboration)*

06

**Collaboration**

# SECURITY *FEATURE*

# SHIB, AD, 2FA *SECURITY*

Shibboleth®

# SHIB, AD, 2FA *SECURITY*

- **Authorization for Github Enterprise is SAML/Shibboleth or Active Directory**
- **Login for Github off prem can use 2FA**
- **If you are currently using Github particularly with Facebook or Gmail credentials then you may want to turn on 2FA**

# UF SERVERS *SECURITY*

# UF SERVERS *SECURITY*

- Data is stored on UF machines
- Can use private IP's

# AUDITABLE *SECURITY*

# AUDITABLE *SECURITY*

- If all code is in one place then it is auditable by people and by scripts

# PRIVATE DATA *SECURITY*

**GitHub**

**123456**

 **Bitbucket**

**PASSWORD**

# PRIVATE DATA *SECURITY*

- **Ensure passwords and other sensitive data are not hosted all over the place**
- **Within an organization or Github Enterprise you can make most of your projects public since only other UFIT citizens can see the code**

# AFRAID *SECURITY*

**No means not comfortable hosting  
code on Github.**

# **AFRAID** *SECURITY*

- **Many people need the features of Github but are uncomfortable hosting code on non UF servers**
- **This kills collaboration opportunities**

# GIT HOSTING *FEATURE*

# **GIT HOSTING** *FEATURE*

- **Lowers barriers to entry skill wise**
- **Makes adoption more likely**
- **If its too difficult people won't use version control**

# ACCESS *FEATURE*

# ACCESS *FEATURE*

- **Lowers barriers to collaboration**
- **If its too difficult people won't collaborate**

# WEB INTERFACE *FEATURE*

# WEB INTERFACE *FEATURE*

- View your code from any device/location
- Every line is a reference for a future need
- Total transparency
- See the history of everything
- Crazy good collaboration tools
- Crazy good communication tools

# COMMUNICATION *FEATURE*

MARKDOWN

WIKI

**All project communication in one place!**

# COLLABORATION *FEATURES*

GitHub Flow / Feature Branch Workflow

# **FORK** *FEATURE*

# **FORK** *FEATURE*

- You take a project you don't have write access to and make a copy of it under your own account so you can modify it
- Fork a project to work on features or bugs
- Fork a project to get a head start on your own project

# BRANCH

*GIT FEATURE*

# BRANCH *GIT FEATURE*

- **A parallel copy/snapshot of your project**
- **This is where you develop a feature**
- **This is where you squash a bug**
- **This is where you experiment**

# COMMIT

*GIT FEATURE*

# COMMIT *GIT FEATURE*

- **A batch of code changes to one or more files with a message describing the changes made**

# PULL REQUEST *FEATURE*

# PULL REQUEST *FEATURE*

- **A notification to the original owner that you have completed a feature or bug fix**

# CODE REVIEW *FEATURE*

# CODE REVIEW *FEATURE*

- The original owner of the project can perform a code review on your feature or bug fix, add comments, make commits, or requests additional changes

# MERGE

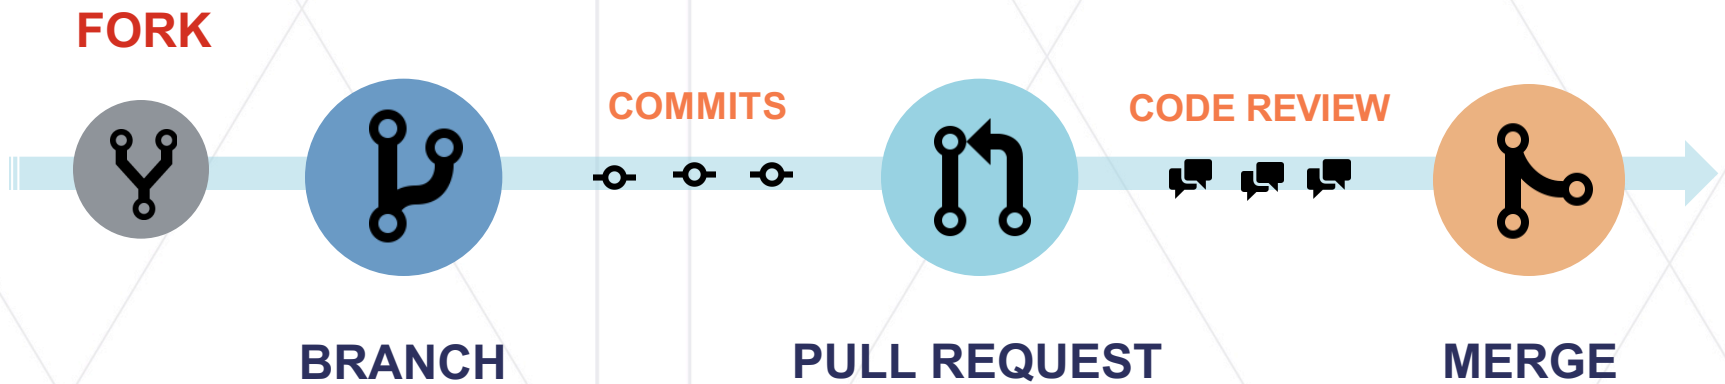

*GIT FEATURE*

# MERGE *GIT FEATURE*

- After the pull request and code review the original owner can merge your feature or bug fix into the original project
- Yay for progress ( hello new feature or goodbye bug )

# COLLABORATION *FEATURES*

GitHub Flow / Feature Branch Workflow

# UF GITHUB

**MOST UF PROJECTS OPEN SOURCED**

**CODE ACCESSIBLE TO ALL UFIT WORKERS**

**CODE CLOSED TO ALL NON UFIT WORKERS**

**UNLIMITED COLLABORATION OPPERTUNITIES**

# WHY GITHUB? *IN REVIEW*

ADOPTION OF VERSION CONTROL

SECURITY

COMMUNICATION

COLLABORATION

PRODUCTIVITY + QUALITY

# OPINIONS FROM PEOPLE WHO CARE

01

I like this.

04

This topic is the first useful thing I have seen on yammer.

02

Love the potential networking and sharing of creativity.

05

This would be a welcome resource for code-sharing in and among UF projects.

03

This would greatly benefit all of UFIT and would be worth any expense.

06

I think it is short sighted for UFIT to not try to centralize and protect the code that is being written to conduct official UF business.

# THE FUTURE

**The future is not a place we go!**

# THE FUTURE *CONTINUED*

**The future is a place we make!**

# CALL TO ACTION

**Share the value of Git & Github  
with anyone and everyone!**

# CALL TO ACTION *CONTINUED*

**Talk to your director! Talk to your friends!  
Share your opinions on yammer!**

**So we can tear down some walls...**

**and build some baller things together!**

Thanks for **BEARing** with me until the end!

# QUESTIONS?

Collaboration *increases*

Communication *increases*

Productivity & Quality *increases*

Security *increases*

Imagine we adopt Github
